

Admin Guide

Running programs on freshlog: students, hours, mentors, and your dual admin/mentor role.

1 The dashboard

Sign in with Google. The cross-program dashboard shows every program as a card with its students, mentors, and hours, plus a “Pending approvals” box when students are waiting. Click a program to open it.

A program opens on three tabs: Overview (its numbers, what needs attention, the latest meetings, the tasks in flight, its mentors), Students (one row per student, click to open them), and Settings (name, cohorts, mentors, removing students, closing the program).

2 Add & approve students

1. Open a program, go to the Students tab, and enter each student's email and full name; both are required. They confirm their Telegram on first sign-in.
2. Click a student's name anywhere in the app to open their page.
3. Students who signed up on their own appear under "Pending approvals" — approve them, then allocate their hours.

3 Assign a task, with the hours for it

Assigning work and granting the hours for it are one act, so there is one form for both, at the foot of the Tasks panel.

1. Open a student from the Students tab and find "Assign a task" under Tasks.
2. Pick the consultant, then the task (one of the presets or type your own), the hours, and the use-by date.
3. Use the note to say what doing it well looks like — “review the intro of each essay” — and the consultant sees it under the task.
4. For Master's Program students, also enter what they paid for these hours.
5. The hours are added to what that consultant already holds with the student, and become the task's budget. Picking a task they already have open tops that budget up instead of starting a second copy of it.

TIP Deadlines are enforced: once one passes, the unused hours expire and mentors can no longer log sessions against them. Extend the deadline to reopen them.

TIP To fix a mistake rather than grant more, use the "⌵" menu on the mentor's row in "Hours by mentor" — it sets the total hours, the use-by date and the amount paid. Raising the total there also asks which task the extra hours are for.

4 Tasks — what the hours are for

Hours are always granted for a task, so the plan and the ledger are the same thing seen from two sides: the task carries the hours as its budget, and the mentor logs each session against one of the student's tasks.

- The Tasks panel on a student's page shows each task, its consultant, hours logged against hours budgeted, its deadline and its progress.
- Progress follows the hours on its own: the first session moves a task to In progress, reaching the budget marks it Done. Setting progress by hand pins it there.
- A task always arrives with hours, because a task nobody has hours for can't be worked on.
- Going over a task's budget is warned, never blocked — the number turns amber.

5 Register & assign mentors

1. Open the "Mentors" page to register a new mentor by email + name + the programs they work in, or click Edit to change an existing mentor's assignments.
2. A program's Settings tab does the same from the other side: assign any mentor to that program (or one of its cohorts), or remove them.
3. Mentors set their own booking links after they're assigned.

TIP Allocating a student hours from a mentor who isn't in their program yet assigns them to it automatically.

TIP Any admin can assign any mentor — including other admins and yourself — to any program. The five admins are also mentors, so they appear in this list too.

6 Program settings

- Rename the program. (The Master's billing rule matches on the name, so renaming that one turns it off.)
- Add cohorts — programs are flat until you do — or delete an empty one.
- Assign or remove its mentors.
- Remove a student, which deletes their account, enrollment, allocations and tasks. Blocked once they have a logged session: at that point the record is part of the hour ledger.
- Close the program down, once no students or scoped staff are left in it.

7 Switch between Admin and Mentor

You are both an admin and a mentor. Use the Admin / Mentor toggle in the top-left of the header to switch dashboards.

In Mentor view you log your own sessions and set booking links like any mentor — once an admin (you or another) has assigned you to a program.

8 Reading the numbers

- Allotted — total hours granted.
- Completed — hours actually delivered.
- Missed — no-show hours (charged but not delivered).
- Expired — unused hours past their deadline.
- Remaining — hours still usable (allotted minus completed, missed, and expired).

9 Correcting and removing logged sessions

Every meetings log — on the dashboard, on a program, on a student — has a pen on each row for admins. It says what it does when you hover it.

- Correct — change the task, hours, date, notes, or how the meeting went. The hours move with it.
- Void — keeps the row in the history and hands the hours back. This is what a mentor can do to their own sessions.
- Delete — removes the row outright, hours included. For rows that should never have been there: a duplicate from the spreadsheet import, a meeting logged on the wrong student. Available on voided rows too, which is how an old voided line finally leaves the log.

TIP Prefer voiding when the meeting really happened. The log is the record of what was delivered, and a deleted row leaves no trace of itself.

1 Nothing happens silently

Every hour change, session, void, approval, and deadline event notifies the student (and the mentor where relevant) and lands in the bell. Allocation changes are also kept in an audit trail on the student's page.
